

When a standard training course is not enough.

We help organisations solve the capability problem behind the training request.

Most organisations don't need more training content. They need people who can solve the real issue, build capability, and embed change. That's where Ratio comes in—blending practical expertise with AI-enabled capability and a people-first approach.

The request may be for a course. The real issue is often deeper.

AI adoption is inconsistent

People have access to tools, but not the fluency, or confidence, not using them.

Technical specialists need to become confident managers

Experts in technical ability struggle with leading teams, career growth or people leaders.

Business Analysis need to add value to AI-enabled delivery

BA's need to evolve skills in AI, requirements, prioritisation and stakeholder alignment or contextual business more important.

Engineering teams are stretched thin and inconsistent practice

Good engineers—but gaps in AI, standards, testing, prioritisation or even capability of our leaders.

Agile and project delivery are present, but not always effective

Frameworks are in place but lacking clarity, alignment, measurable outcomes and focus isn't why.

We don't begin with a course. We begin with the business problem.

A course can transfer information.

Ratio helps people and teams build capability.

We start with a clarity of need to align our approach by training, on-demand expert intervention, or coach-delivered team capabilities rooted from the investment.

Expert-led working

Consultancy & reviews

Mentoring & coaching

Reinforcement & support

Outcome review

The Ratio journey

Understand. Diagnose. Design. Deliver. Embed.

1

Capability conversation

We understand the why, what's involved and the expected outcome.

2

Discovery & diagnosis

We explore data, processes, people and culture to surface performance gaps.

3

Capability recommendation

We recommend the right blend of training, expert support and coaching for impact.

4

Tailored design

We shape the program around your context and priorities.

5

Expert-led delivery

We deliver practical, hands-on capability building that drives real-world results.

6

Application & reinforcement

We support transfer with tasks, coaching and real-world reinforcement.

7

Outcome review

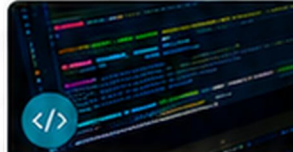

We review what changed, what worked—and plan sustained progress.

Capability areas that solve real business problems

AI Capability & Adoption

Move from awareness to confident, responsible and effective AI use at all levels.

[Learn more →](#)

Software Engineering & Technical Capability

Improve engineering quality, architecture, AI use and development and sustainable delivery and standards.

[Learn more →](#)

Leadership & Management

Develop practical leadership skills to lead with clarity, build high-performing teams and drive business impact leaders.

[Learn more →](#)

Business Analysis & Project Delivery

Strengthen analysis, stakeholder engagement and delivery practices that drive smarter, faster, results-driven.

[Learn more →](#)

Agile Delivery & Ways of Working

Build effective agile capability, flow and collaboration to improve team delivery alignment and value.

[Learn more →](#)

Led by practitioners, not generic trainers.

Our instructors are experienced experts who have done the work.

Heads of L&D
Facing capability gaps and limited learning effectiveness.

HR & Talent Development
Building skills pipelines and career growth.

Transformation Leaders
Aligning people and capability to change ambitions.

PMO & Delivery Leaders
Improving delivery maturity, team performance and project outcomes.

Engineering Leaders
Strengthening technical capability, AI maturity and engineering for your business.

Operations Leaders
Needing better skill, workforce and value outcomes.

Tell us what needs to improve.

Whether it's leadership, delivery, engineering, analysis, or reporting we'll help you build the capability to make a measurable impact.
